Unfortunately, Lightroom 5 gave my an unexpected problem. I was navigating through my images and the "File>Open Previous" function stopped working. I tried to go to the file and instead of opening the next file in my collection, it opened a whole bunch of other files in my project. I was even surprised when I realized that the entire window I had made to open previous files opened up into a completely different set of files than the one I was dealing with at the moment. I reset the window several times just to be able to open the file I wanted but, unfortunately, the same thing happened every time. This seems to indicate that the "File>Open Previous" is not done with any of my work. I also found that when I reload a project I was working on earlier the previous files were open into a different collection, not the one I was working in, and the window seemed to be without anything to click on, no heading or title, whereas the previous collection I was in had a heading and the files in that collection were listed in time sequence by import date. In other words, my work was all openned up into a different collection that did not correspond to the one I was working in. Let's first set the scene. I have an iPad pro which I use for most things. However, for this review, I'm also using some Photoshop items. I'm also using a Sony A6500 (a Nikon D810 is my real camera), and the Sony XQD Pro card from SanDisk which is also part of the kit. While I'm using the AF, it's only of the basic autofocus variety and not phase or contrast detection. Lighting is quite low, owing to the fact the sun is not yet setting. There's a feeling of texture in most of the film stock, although it's being reproduced in the LCD. It's an analogue reproduction process which is well-suited to the look of the motion picture format. A good amount of other pops, flaws and grain is present in the film stock – especially in the portraits. This is great to see in the final prints, but it doesn't necessarily need editing to look great. Naturally, I was editing off-screen when I used the Apple Pencil. In fact, editing was done in Photoshop Sketch.
