CS6 does a great job of working in smaller devices like smartphones, but it doesn't boast an @media multi-device name to accomplish similar goals. Adobe's preview used to offer a "mobile web" mode for choosing sizes and then faking responsiveness. But that was too hard for designers and also limits you to what a designer imagined the page should look like on phones. At any time, open dozens of files in CS6, and find it hard to manage them all. But for a prime example of this problem, imagine opening a set of hundreds of proposals in a day. At the end of the day, you're much less likely to pick the design that surprises you. So you have to open each proposal again and again, and it's much more likely you'll simply pick the most recent proposal. We operate much of the Photoshop design process in a team environment. When we meet, we'd like to sit down with the whole team in Photoshop and share things that we've seen. That's easier and faster in Photoshop than meeting in a conference room and trying to share things on the physical whiteboard or with pen and paper. The creative DNA of quality design is at the heart of Adobe Photoshop Features. Adobe Photoshop Elements is an affordable page layout and design software that makes it easy to create, edit, publish and present high-quality graphics on the Web or in print. Adobe is getting more serious about software as a service, cutting off the base of high-priced professional photography packages with Lightroom and Creative Cloud. That means you have to start using cloud-service-based tools like Lightroom instead of your desktop software. It also means that you have to pay that monthly fee. I'm a good example — I've been a lifelong desktop photographer and a current Lightroom user.

And with Share, you can now send your favorite PSD to any device or app, as well as bulk metadata changes. With new features like Smart Hints and Shape Fill, you can edit shapes on mobile devices and preview changes in the app so you can quickly make revisions and then send it back.

For example, he uses Noise Ninja to simulate a foggy, wintry landscape, and he uses the Heartbeat feature to clone surfaces in the piece.
