Photoshop boasts a variety of powerful tools that make photo editing faster and simpler, including the new Touch Tools and the god-like Filter Gallery, and the Connect tab in the side panel and experience in the browser. Vector based graphics are becoming more and more popular. Vector based graphics are the graphics that are drawn from shapes, not with lines, as the pictures are convex. Layers are used for placing them on the photo, making sure that they can overlap. If you want to make objects with the same color, you can colorize them using the object effects. that you want to see on the picture. Photoshop will automatically select the exact color on the photo. This process can be repeated until you get the desired color.
